EDUCATION

University of Pamulang

Master Degree in Computer Science

Coursework: data mining, algorithms, optimization, computer systems, statistics, IT governance, AI, research, entrepreneurship, NLP, computer vision, and big data.

Banten, Indonesia

Jul. 2023 – Present

University of Pamulang

Bachelor's Degree in Computer Science

Coursework: Data Structures & Algorithms, Software Engineering, Databases, Operating Systems

Banten, Indonesia

Mar. 2019 – Mar. 2023

EXPERIENCE

Software Developer

Pinetop Technology Venture Sdn. Bhd.

Jul. 2023 – Present

Malaysia

- Designed and implemented RESTful APIs and event-driven backend services using Node.js and AWS Lambda.
- Developed and maintained serverless applications with scalable data models using DynamoDB, applying best practices for NoSQL schema design.
- Built backend solutions integrated with various AWS services (API Gateway, S3, CloudWatch, SQS, SNS).
- Collaborated closely with frontend developers, QA engineers, and product teams in an Agile environment.

Software Developer

Bayafleet

Dec. 2024 – Aug. 2025

Malaysia

- Designed and implemented RESTful APIs and event-driven backend services using Node.js and AWS Lambda.
- Developed and maintained serverless applications with scalable data models using DynamoDB, applying best practices for NoSQL schema design.
- Built backend solutions integrated with various AWS services (API Gateway, S3, CloudWatch, SQS, SNS).
- Collaborated closely with frontend developers, QA engineers, and product teams in an Agile environment.

Software Engineer

Fibr Corp

Aug. 2022 – May. 2023

Indonesia

- Played an essential role in code integration, testing, and production deployment, ensuring stable releases and minimal downtime.
- Developed dynamic and responsive user interfaces using React.js with strong TypeScript typing for reliability and maintainability.
- Integrated frontend components with backend systems via RESTful APIs and real-time services
- Worked closely with backend developers and DevOps to ensure smooth CI/CD pipelines and successful production releases.
- Implemented reusable component libraries and design systems to streamline development across projects.

Software Developer

PT Griya Raya Inovasi Teknologi

Jun. 2021 – May. 2023

Indonesia

- Developed dynamic and responsive user interfaces using React.js with strong Javascript typing for reliability and maintainability.
- Integrated frontend components with RESTful APIs and WebSocket services, collaborating closely with backend teams to ensure consistent data flow
- Applied state management techniques (e.g., Redux, Context API) to handle complex UI logic.
- Implemented reusable component libraries and design systems to streamline development across projects.

TECHNICAL SKILLS

Programming Languages: JavaScript (5+ Years), TypeScript (3+ Years), Python (1+ Year)

Frameworks / Libraries : Node.js (4+ Years), Express.js (2+ Years), React.js (4+ Years), Next.js (2+ Years), Tailwind CSS (4+ Years), Material UI (4+ Years), Flask (1+ Year)

Cloud / Serverless : AWS Lambda (2+ Years), EventBridge (2+ Years), SNS (2+ Years), SQS (2+ Years), API Gateway (2+ Years), Firebase (2+ Years)

Databases : PostgreSQL (4+ Years), MySQL (4+ Years), MongoDB (2+ Years), DynamoDB (2+ Years)

Developer Tools : Git (4+ Years), AWS Console (2+ Years), Firebase Console (2+ Years)

- GPSFleet** | *AWS, DynamoDB, Lambda, SNS, SQS, EventBridge, Firebase, Node.js, JavaScript* **Bayafleet Project**
- Developed a serverless backend architecture on AWS using Lambda functions to process requests, manage business logic, and reduce infrastructure overhead.
 - Designed and optimized DynamoDB schemas to handle vehicle, device, and user data with efficient query performance.
 - Implemented asynchronous communication between microservices using Amazon SNS for event publishing and SQS for reliable message queuing.
 - Configured EventBridge rules to schedule cron-based Lambda executions for automated data processing and reporting tasks.
 - Integrated Firebase for authentication
 - Built Node.js services to orchestrate data flows, handle API integrations, and support GPS tracking features.
 - Implemented monitoring, logging, and error handling across AWS services to ensure reliability and scalability of the system.
- BayaFleet** | *AWS, DynamoDB, Lambda, SNS, SQS, EventBridge, Firebase, Node.js, JavaScript* **Bayafleet Project**
- Developed a serverless backend architecture on AWS using Lambda functions to process requests, manage business logic, and reduce infrastructure overhead.
 - Designed and optimized DynamoDB schemas to handle vehicle, device, and user data with efficient query performance.
 - Implemented asynchronous communication between microservices using Amazon SNS for event publishing and SQS for reliable message queuing.

Data Retention System | *React.js, Next.js, Redux, Tailwind CSS, TypeScript***Fibr Corp Project**

- Developed a responsive and user-friendly web application using React.js and Next.js, ensuring optimal performance
- Implemented global state management with Redux to handle complex data flows and improve application scalability.
- Designed and styled reusable UI components with Tailwind CSS to accelerate development and maintain consistent design.
- Leveraged TypeScript for type safety, reducing runtime errors and improving code maintainability.
- Collaborated with backend teams by integrating RESTful APIs, managing data.
- Optimized application performance through code splitting, lazy loading, and efficient state updates.

Database Management | *React.js, Redux, Tailwind CSS, TypeScript***Fibr Corp Project**

- Developed a responsive and user-friendly web application using React.js ensuring optimal performance
- Implemented global state management with Redux to handle complex data flows and improve application scalability.
- Designed and styled reusable UI components with Tailwind CSS to accelerate development and maintain consistent design.
- Leveraged TypeScript for type safety, reducing runtime errors and improving code maintainability.
- Collaborated with backend teams by integrating RESTful APIs, managing data.
- Optimized application performance through code splitting, lazy loading, and efficient state updates.

Sisfopers TNI AD | *React.js, Redux, Tailwind CSS, Javascript***PT Griya Raya Inovasi Teknologi**

- Developed a responsive and user-friendly web application using React.js ensuring optimal performance
- Implemented global state management with Redux to handle complex data flows and improve application scalability.
- Designed and styled reusable UI components with Tailwind CSS to accelerate development and maintain consistent design.
- Collaborated with backend teams by integrating RESTful APIs, managing data.
- Optimized application performance through code splitting, lazy loading, and efficient state updates.

MIT Logistic | *React.js, Redux, Tailwind CSS, Javascript***PT Griya Raya Inovasi Teknologi**

- Developed a responsive and user-friendly web application using React.js ensuring optimal performance
- Implemented global state management with Redux to handle complex data flows and improve application scalability.
- Designed and styled reusable UI components with Tailwind CSS to accelerate development and maintain consistent design.
- Collaborated with backend teams by integrating RESTful APIs, managing data.
- Optimized application performance through code splitting, lazy loading, and efficient state updates.

Al-Bayan App | *React.js, PostgreSQL, Tailwind CSS, Material UI***FYP | Pamulang University**

- Developed a full-stack web-based information system to support the internal operations of a cooperative's savings and loan (Simpan Pinjam) services. The platform was designed to streamline transaction records, member management, and loan processing, enabling staff to operate more efficiently and transparently.
- Built the frontend interface using React.js, styled with Tailwind CSS, and enhanced with Material UI for modern, responsive design.
- Developed the backend API using Express.js, handling core business logic such as member registration, loan approval workflows, savings tracking, and transaction history.
- Designed and implemented a relational database schema using PostgreSQL to manage members, accounts, loan records, and transaction logs.
- Integrated authentication and role-based access control for admins, staff, and finance officers using JWT.
